

Dear colleagues,

European University of Brčko District, European University “Kallos” Tuzla, College of Vocational Studies for Management and Business Communications in Belgrade and Faculty of European Legal and Political Studies in Belgrade are organizing the eleventh International Scientific Meeting on May 19th 2023 on the topic

HUMANITY BEFORE THE CHALLENGE OF ARTIFICIAL INTELLIGENCE

and invite you to take part in this scientific meeting.

What is artificial intelligence? It is the ability of a device to imitate certain human actions such as learning, draw conclusions, planning and creativity, i.e. to mimic human intelligence.

Most of the tasks of artificial intelligence can be described in terms of algorithms, search, deductive and inductive reasoning, and other precise mathematical terms. Only a small part of researchers deals with methods that aim to achieve general reasoning in the style of a human (Janičić, Nikolić, *Veštačka inteligencija*, 2022.).

In the scientific sense, artificial intelligence belongs to the field of computer science, and it was founded as a special scientific discipline in 1956 at The Dartmouth Summer Research Conference on Artificial Intelligence, when it got its current name. It finds its application in numerous areas of social life, especially in agriculture and food production, public administration and services, machine translation from foreign languages, in the household in the form of smart devices, traffic, health system, internet search, online shopping, cyber security, as well as

numerous other areas of possible application of artificial intelligence. One thing is certain – artificial intelligence is deeply rooted in the everyday life of modern man.

Although there are many who advocate the application of artificial intelligence, there is also a large number of those who believe that there is a threat of artificial intelligence. It is illustrative that 61% of Europeans have a positive view of artificial intelligence and robots, but 88% claim that these technologies should be carefully managed (Eurobarometer, 2017, EU28).

What are the benefits that humanity has from the application of artificial intelligence, and what are the potential dangers that threaten - that is the topic of this scientific meeting.

Bearing this in mind, we invite you to participate in the XI International Scientific Meeting with your scientific or professional work and contribute to the clarification of this issue.
